**Project:** Superstore Sales Dashboard

**Simple Insights Report:**

1. **Overall Performance:** The store is doing well with over **$2.3M in total sales** and a profit of about **$286K**. This shows the business is making a good profit on the items it sells.
2. **When do people shop most? (Monthly Trend):** Most of the sales happen at the end of the year.
    - The **Central** region peaks in **October**.
    - The **East** and **South** peak in **November**.
    - The **West** peaks in **December**.
    - **Simple Takeaway:** People buy more during the "Holiday Season" (Q4), so the store needs to have extra stock ready during these months.
3. **Where are the sales coming from? (Regional):** The map shows that big states like **Texas, California, and New York** are the main areas where people shop. We should focus our ads on these big states to keep the sales high.
4. **What are people buying? (Products): Chairs** and **Phones** are the top-selling items. This tells us that people come to this store mainly for expensive office furniture and electronics. Items like "Fasteners" or "Labels" don't make much money, so they aren't as important for the business.
5. **Final Summary:** The dashboard shows the store is successful, especially during the holidays. To make more money, the store should focus on selling more Phones and Chairs in the big states during the end of the year.
